

Rotork provides a worldwide field service response for its customers for all types of actuator (electric, pneumatic and hydraulic – including those in hazardous environments such as nuclear and off-shore installations). Our support can be planned or in response to an emergency situation.

Our field technicians perform a number of different tasks for customers:

- Installation and commissioning of actuators to ensure they are correctly set up.
- Upgrading actuators e.g. the installation of additional cards.
- The installation and commissioning of network/bus systems.
- The inspection and repair of damaged/deteriorating actuators.
- The emergency repair of actuators.

With over 200 directly employed service technicians and over 1,000 service technicians employed by our agents worldwide, we have the infrastructure required to effectively support all our customers needs. In all our work we only use original parts as ensuring the continued operation of Rotork actuators is of critical importance. Additionally, all our technicians hold all the appropriate safety qualifications and we ensure that all work is carried out correctly. We provide a 12 month warranty on all the work we carry out.

"I would like to express my sincere thanks to Rotork who responded so effectively to a recent flooding incident. The dedication and organisation on the engineer concerned is a credit both to him and your company"

M. Jackman, Production Engineering Manager,
Three Valleys Water, Vivendi Group.
